

FIR- FFT Project

Mehdi HANZOUTI

2024

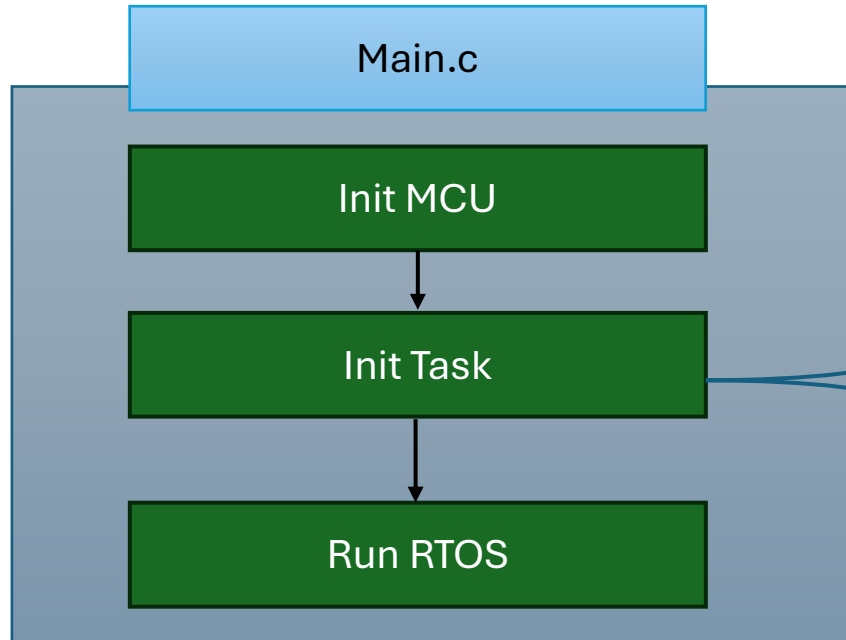

Project Description

Sampling Time =4ms

Software Description

Sampling Time =4ms

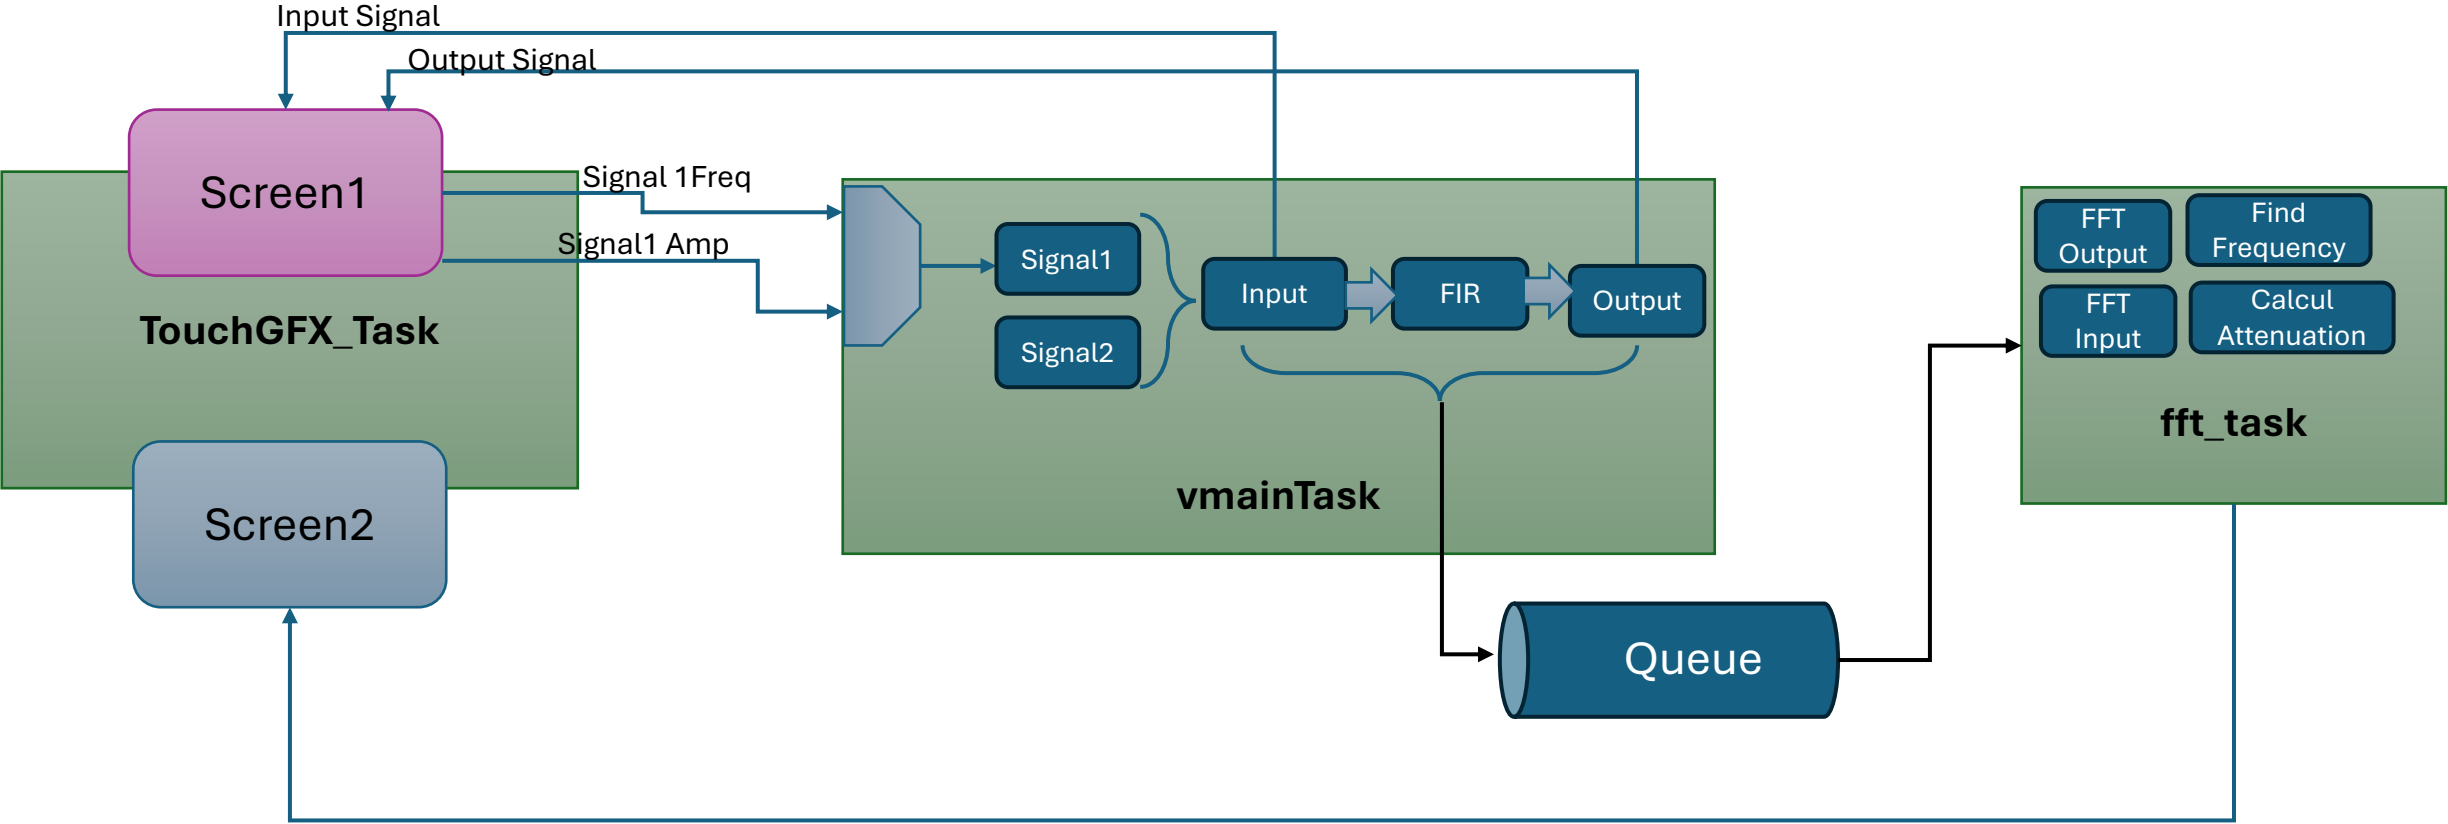

Configure 3 Tasks :

- **TouchGFX_Task** : managing the ScreenView
- **vmainTask** : generate input Signal& apply fir
filtre
- **fft task** : produce fft for both input & output

Software Description

Sampling Time =250Hz

FIR Octave Script

```
close all;
clear all;
clc;

pkg load signal

%FIR1
fs=250;
fc=20; %20Hz
wc=fc/(fs/2); % normalized frequency

b=fir1(80,wc); % Low pass filter

figure;
stem(b);

freqz(b,1,2^12,fs); %frequency response of filter
[H,f]=freqz(b,1,2^12,fs);
figure;
plot(f,abs(H));
xlabel('Frequency Hz');
ylabel('Freq Response');
box off; grid on; axis tight;
```

After executing this script,
Call the function `stm32f4_fir_coeffs(b)`, it will
generate a new FIR coef
